

java::util::HashMap  
< String, EventHandler >

```
classDiagram
    class java_util_HashMap["java::util::HashMap<String, EventHandler>"]
    class server_HandleMap["server.HandleMap"]
    server_HandleMap --|> java_util_HashMap
```

The diagram consists of two class boxes. The top box, representing the superclass, is white with a thin black border and is divided into three horizontal sections. The top section contains the text 'java::util::HashMap' followed by '< String, EventHandler >' on the next line. The bottom two sections are empty. The bottom box, representing the subclass, is gray with a thick black border and is also divided into three horizontal sections. The top section contains the text 'server.HandleMap', while the bottom two sections are empty. A blue arrow with an open triangular head points from the top section of the gray box to the bottom edge of the white box, indicating an inheritance relationship.

server.HandleMap
